                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to compounds modulating CD59 mediated complement CC activity. It provides (i) molecules structurally mimicking human CD59 CC amino acid residues 42-58 (region which serves as binding site for CD59 CC inhibit the formation of the human C55-9 complex. These minetics CC specifically bind to amino acid residues 359-384 of human C9. (i) CC in a spatial orientation which can promote the formation of the C55-9 complex. These minetics CC complex. Compounds that mimic CD59 can be used to increase CD59 complex. Compounds that mimic CD59 can be used to increase CD59 patients in need of suppression of complement-mediated inflammation, e.g. crimine disorders and diseases such as immunovasculitis, rheumatoid CC carthritis, scleroderma. Compounds that mimic C9 can be used to promote activation. The composition can be administered as an adjunct to tumour theorems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                  Sequences AAY77154-Y77174 represent novel peptides capable of binding the and activating human fibroblast growth factor receptor (FGFR). The peptides of the invention have amino acid sequences that are unrelated to that of the human FGFR or to those of prior art FGFR-binding the following the first of t
                                                                                                                                                                               Claim 16;
                                                                                                                                                                                               New polypeptide useful as a receptor agonist or antagonist in treating wounds and promoting angiogenic capability, and as a model for designing small molecules with agonist or antagonist activity.
                                                                                                                                                                                                                                                                                                                                                                                                      McConnell SJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                             (CHUS ) CHUGAI PHARM CO LTD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   28-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fibroblast growth factor receptor; FGFR ligand; activation; phage display library; agonist; antagonist; drug screening; competitive inhibitor; angiogenic; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20-JAN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200003245-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-MAY-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FGFR-binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 their ability to bind an FGFR probe. Peptide 13-1 (AAY77161) was used as the basis for the construction of an evolved phage display library, which led to the identification of further peptides (AAY77168-Y77174, consensus sequence AAY77153) capable of binding human FGFR. The peptides as competitive inhibitors to inhibit the binding of FGF to its receptor. human FGF. The peptides are useful as FGFR agonist or antagonist therapeutic agents for treating wounds and promoting angiogenesis. The have FGFR agonist or antagonist activity. The peptides are also useful as a model for designing small molecules which economical, and are alternatives to expensive recombinant FGF or FGF therapeutic addition, they have an improved

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encoding proteins or enzymes involved in proteolytic cleavage. The invention is based on the use of caspase expression cassettes comprising the coding sequence of a proteolytic cleavage site flanked by sequences encoding two caspase subunits. A fusion polypeptide comprising a first and a second caspase subunit, separated by a cleavage site not associated in nature, is useful for cloning gene encoding enzymes involved in proteolytic cleavage. An expression cassette containing fusion polypeptide is used to identify a mutant cell line deficient in an enzyme of interest and is also useful for diagnosis and suppression of proliferation or metastases of a tumour cell characterised by overexpression of a polypeptide (e.g. Cathepsin B or urokinase, selectively expressed in the tumour cells). DNA encoding fusion polypeptide is used in gene therapy.
Sequences AAW35694-99 represent 15-20 residue peptides of white faced hornet antigen 5 molecule. The invention relates to peptides derived from vespid venom antigen 5 (VV5) that are antigenic for T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for functional cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              interdomain linker replaced by swedish mutant beta-secretase cleavage site. This modified caspase-3 plays a pivotal role in Alzheimer's disease. Caspases are a family of cysteine proteases, that participate in the initiation and execution of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein (APP) beta-secretase cleavage site (AAE00611) (NL/KI) mutant. APP sequence containing this mutation is less susceptible to beta-secretase sequence to site is used to construct an artificially engineered chimeric cassette comprising human caspase-3 with

Cermona (yellowjacket), V. pennsylvan: flavopilosa (yellowjacket), V. germanica (yellowjacket), V. pennsylvan: yellowjacket), V. squamosa (yellowjacket), V. vidua (yellowjacket) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       proliferation in mice immunised with VV5. The peptides can be used treat or diagnose vespid venom sensitivity e.g. to Dolichovespula maculate (white face hornet), Vespula vulgaris (yellowjacket), V.
       AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides,
                                                                                          New fluorogenic compositions - containing 2 fluorophores separated by a peptide comprising a protease binding site, used for detecting protease activity in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fluorogenic protease indicator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW82186;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                888888888<del>%</del>&
The present invention describes fluorogenic compositions which can be used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metastasis, haemophilia, emphysema peptide, a peptide spacer and a donor and an acceptor fluorophore. The detected. The present sequence is one of the peptides can then be exemplification of the invention.
                                                                                                                                                                                                                                                                                                     New fluorogenic compositions whose fluorescence level increases in the presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue
                                                                                                                                                                                                                                                         Disclosure; Page

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SQ
                                                                            The present invention describes fluorogenic compositions which can used for the detection of protease activity. This can be useful as indicator of viral infection, cancer metastasis, haemophilia, emphy heptide, a peptide spacer and a fluorogenic compositions comprise a peptide is cleaved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in
                                                                         detected. The present sequence is exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. The present sequence represents a Bcl-family member BH3 domain consensus sequence which is used in an example from the
                                                                                                                                                                                                                                 can be used as an apoptosis inducer or inhibitor. BAD polypeptides and polynucleotides can be used for screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include inducing or inhibiting apoptosis in a cell. Candidate compounds identified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell death, reperfusion cell death, wound healing, cancer, viral infections,
                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated or synthetic polypeptide (I) comprising a less than full length amino acid sequence of a mutant Bcl-XL/Bcl-2 associated cell death regulator polypeptide (BAD) or its fragment, which contains amino acid substitutions at Serll8 of a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                userul for screening apoptosis, comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New mutant Bcl-XL/Bcl-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Ser118, Ser155 or
                                                                                                                                                                                                                                                                                                                                                                                                          BAD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-MAY-2000; 2000WO-US11864
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200110888-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Unidentified

CC side chain of the peptide, where the side chain functional group is attached to the C-terminus of the peptide, or a CC or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclopentyl cyclopentyl group is COOH CC monosubstituted with a 1-5C straight or branched chain alkyl group, alkyl group, or benzyl. The peptides AAB37001-B3705 represent examples CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC useful for modulating apoptosis in the cells of a subject, or for constaining a cells. It is also useful for inhibiting Bcl-2 corresponding to amino acids 72-97 of CC subject afflicted with a cancer characterized by cancer cells that con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or conjugate is also useful for inhibiting Bcl-2. The cancer includes prostate, colorectal, gastric, coloreased apoptosis, e.g. neurodegenerative disorders, acquired by cancer characterized by cancer cells that con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or conjugate is also useful for treating a concercased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                 Matches
      Schizophrenia-associated isoform peptide #213.

The invention relates to methods and compositions for screening, CC diagnosis and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) Associated Features (SFs) and SCH associated Protein Isoforms (SFIs) in samples, e.g. by electrophoresis, CC studying the effectiveness of treatments and for identifying potential CC Schizophrenia (SCH) and the relative abundance of at least 1 chosen feature correlates (CC therapy administered to a subject with SCH and the relative abundance of at least 1 chosen feature correlates (CC therapy administered to a subject with SCH and the relative abundance of CC at least 1 chosen feature which correlates with the severity of SCH.

CC (e.g. secondary messengers) are studied to diagnose SCH, monitor the CC targets to identify and produce potential therapeutic agents for the CC treatment of SCH. The paucity of detectable neuralyic defects and stinguishes neuropsychiatric disorders such as SCH from neurological converted the interfect of any been identified in many cases. Consequently the identification and CC disorders, where manifestations of anatomical and biochemical changes characterisation of cellular and/or molecular causative defects and consequents. AAUI5162 represent the amino acid sequences of the anatomical invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Associated Protein Isoforms (SPIS) in samples, e.g. by electrophoresis, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, studying the effectiveness of treatments and for identifying potential therapeutic agents. The method is used for (1) screening or diagnosis of SCH and the relative abundance of at least 1 chosen feature correlates with the presence or absence of SCH; and (2) monitoring the effect of therapy administered to a subject with SCH and the relative abundance of at least 1 chosen feature which correlates with the severity of SCH. The expression and activity of the SFS, SPIS and related molecules (e.g. secondary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                neuropathies are necessary for improved treatment of neuropsychiatric disorders. AAU15114-AAU15762 represent the amino acid sequences of schizophrenia-associated isoforms used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    targets to identify and produce potential therapeutic agents for the treatment of SCH. The paucity of detectable neuralgic defects distinguishes neuropsychiatric disorders such as SCH from neurological disorders, where manifestations of anatomical and biochemical changes have been identified in many cases. Consequently the identification and characterisation of cellular and/or molecular causative defects and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Diagnosing and monitoring Schizophrenia by detecting the presence of Schizophrenia Associated Features and Schizophrenia Associated Protein Isoforms in samples of cerebrospinal fluid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Schizophrenia; neuroleptic; diagnostic; neuropsychiatric disorder; neurological disorder; neuropathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAB06316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DEC-205 peptide 3 corresponds to amino acids 82-96 of the human characteristic cell receptor DEC-205 (see AAM3843). BALB/c mice have been immunised with DEC-205 peptide 1 (see AAM3843) and DEC-205 peptide 2 (see AAM38431). Spleen cells were subsequently fused with NS-1 myeloma cells. A hybridoma, 2F5, was obtained with produced monoclonal antibody binding to peptide 1 but not to peptide 2 or to control DEC-205 peptide 3. The invention provides isolated human DEC-205, its extracellular domain and equivalent fragments, and polynucleotides encoding these polypeptides. Further provided are ligands (preferably an antibody or antibody binding fragment) that bind to human DEC-205, as well as constructs for use in prophylaxis and therapy that comprise such a ligand, human DEC-205 or an extracellular domain coupled to an antigen capable of inducing a protective immune response in a patient, or to a toxin (e.g. ricin A chain to specifically destroy dendritic cells as part immuneruments of the part of the specifically destroy dendritic cells as part immuneruments.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAE00609 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the beta-secretase site of human beta-amyloid precursor protein (beta-APP). The sequence may be cleaved by a mammalian subtilase, specifically subtilisin-kexin isoenzyme 1 (SKI-1), a type-1 SKI-1 may be used for monitoring SKI-1 activity, for screening inhibitors fragments of SKI-1 which bind to the SKI-1 activity. Proteic inhibitors of SKI-1 which bind to the SKI-1 catalytic site may be used as include hypercholesterolaemia, high levels of fatty activity. They may be used to treat diseases include hypercholesterolaemia, high levels of fatty acids, lipids or and amvinial prophosphate, liver steatosis, Ras-dependent cancer, restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel soluble proteic fragment of subtilisin-kexin isoenzyme for producing a polypeptide useful for treating hypercholesterolemia, listeatosis and amyloidosis, comprises a specific amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 4; Page 51; 119pp; English.

CC The present sequence is a beta-secretase cleavage site of beta-amyloid construct a chimeric cassette comprising human caspase-3 with interdomain the construct a chimeric cassette comprising human caspase-3 with interdomain that participate in the initiation and execution of apphotosis.

CC The present invention relates to a method for functional cloning of encoding proteins or enzymes involved in proteolytic cleavage pivotal that conding sequence of a proteolytic cleavage expression cassettes comprising encoding two caspases subunits. A fusion polypeptide comprising a first in nature, is useful for cloning gene encoding enzymes involved in proteolytic cleavage. In a second caspase subunit, separated by a cleavage site not associated polypeptide is used to identify a mutant cell line deficient in an cryme of interest and is also useful for diagnosis and suppression of correspression of a polypeptide (e.g. Cathepsin B or urokinase, cased in the tumour cell characterised by cased containing fusion of polypeptide is used in gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoding proteins or enzymes involved in proteolytic cleavage. The invention is based on the use of caspase expression cassettes comprising the coding sequence of a proteolytic cleavage site flanked by sequences encoding two caspase subunits. A fusion polypeptide comprising a first and a second caspase subunit, separated by a cleavage site not associated in nature, is useful for cloning gene encoding enzymes involved in proteolytic cleavage. An expression cassette containing fusion polypeptide is used to identify a mutant cell line deficient in an enzyme of interest and is also useful for diagnosis and suppression of proliferation or metastases of a tumour cell characterised by selectively expressed in the tumour cells). DNA encoding fusion polypeptide is used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel fusion polypeptide comprising first and second caspase subunit separated by cleavage site not associated in nature with caspase subunit, useful for cloning gene encoding enzymes involved in proteolytic cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alzheimer's disease. Caspases are a family of cysteine proteases, that participate in the initiation and execution of apoptosis. The present invention relates to a method for functional cloning of generoding proteins or enzymes involved in proteolytic cleavage. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present amino acid sequence is a beta-secretase cleavage site of an amyloid precursor protein (APP). This sequence is used to construct an artificially engineered chimeric cassette comprising human caspasewith interdomain linker replaced by swedish mutant beta-secretase

Normal cleavage of the protein occurs between amino acids Met596-Asp597 and val636-Ile637 (positions 4-5 and 44-45 of AAY69701). The novel polypeptide is used to identify agents that interact specifically with it. These agents regulate metabolism of APP, particularly they slow down or reduce production of beta-amyloid, so can be used to treat neurodegenerative diseases, particularly Alzheimer's disease.
                                                                                                             (RHON )

C
AAW08359-W08362 represent substrates for the enzyme of the invention.

CC The enzyme of the invention is beta-secretase, and specifically cleaves compared to occur via cleavage between residues 16 and 17 of the compared to occur by beta-secretase. Pathogenic processing to beta-app CC beta-amyloid peptide region by an alpha-secretase. Pathogenic processing the invention, which detects at least one of the beta-app CC products formed on cleavage. The method can be used to determine whether compounds effective to at least partially inhibit processing that-app. Compounds effective to at least partially inhibit cleavage of beta-app in cells or mammalian hosts. Isolation and purification of beta-secretase.

CC will permit chemical modelling of a critical event in the pathology of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뭐

Normal val636-11e637 (positions 4-5 and 44-45 of AAY99701). The novel it. These agents regulate metabolism of APP, particularly they slow down neurodegenerative diseases, particularly Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sox
AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in conformation changes in nucleic acids, oligosaccharides, proteins, peptides, lipids, phopholipids, glycolipids, plycoproteins, steroids or polymers. In addition, attachment of a The composition is composed of p = peptide comprising a protease binding attached to the amino terminal amino acid and F2 is attached to the protease, F1, F2 peptides = fluorophores where F1 is carboxyl terminal amino acid and S1, S2 peptides = when present, are peptide spacers where S1, when present, is attached to the amino terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   acid,
                                                                                                                        Sequences AAY33752-Y33756 are synthetic oligopeptides used for measuring the activity of beta-secretase (AAY33741). Beta-secretase is capable of cleaving beta-amyloid protein precursor (APP) (AAY33742). These synthetic peptides contain the cleavage site of APP. Beta-secretase and APP are used in a method for detecting human beta-secretase cleavage of polypeptides and for identifying beta-secretase inhibitors. Inhibition of beta-secretase activity would be useful for chemical modelling of a critical event in the pathology of Alzheimer's disease. Inhibitors of beta-secretase would be useful for the prevention and treatment of Alzheimer's disease and Down's Syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Beta-secretase; beta-amyloid protein precursor; APP; Down's syndrome; Alzheimer's disease; measure activity; cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY33755 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes fluorogenic compositions which can be used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metastasis, haemophilia, emphysema, thrombosis and arthritis. The fluorogenic compositions comprise a peptide, a peptide spacer and a donor and an acceptor fluorophore. The peptide is cleaved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New fluorogenic compositions whose fluorescence level increases in the presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-AUG-2001

                                                                                                                                                 AAG73316;
                                                                                                                                                                AAG73316 standard; Peptide;
                                                                                                                                                                                                                                                                                                                                The present invention describes fluorogenic compositions which can used for the detection of protease activity. This can be useful as indicator of viral infection, cancer metastasis, haemophilia, emphy peptide, a peptide spacer and a donor and an acceptor fluorophore. Detected: The present sequence is one of the peptides described in
                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                  AAB47265 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes fluorogenic compositions which can be used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metastasis, haemophilia, emphysema, thrombosis and arthritis. The fluorogenic compositions comprise a peptide, a peptide spacer and a donor and an acceptor fluorophore. The present sequence is cleaved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; Page 71; 86pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New fluorogenic compositions whose fluorescence level increases in the presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2001-389573/41.

                                                                                                                                                                                                                                         The sequences given in AAB47262-67 represent synthetic peptides containing the cleavage sites derived from wild-type beta-amyloid precursor protein (APP). These peptides were used in assays utilising partially purified beta-secretase to identify beta-secretase inhibitors. Beta-secretase is thought to be responsible for the pathogenic processing of APP to form beta amyloid peptide (beta-AP) in beta-AP related conditions, e.g. Alzheimer's disease, Downs syndrome, HCHWA-D etc. Beta-secretase has a molecular weight of 260-300 kp and will bind to wheat germ agglutinin but not to concanavalin A. Beta-secretase will cleave both the wild type and the Swedish mutation of APP.
